How to Run Project File in XAMPP

1. XAMPP install application (xampp-win32-1.8.1-VC9-installer)

2. Download the zip file your email inbox

3. Extract the file and copy "Project name" folder

4. Paste inside root directory/ where you install xampp local disk like C: drive D: drive E:

drive F: drive then paste: (for c: / xampp/htdocs /   folder paste here)

[Place your Project files in the "htdocs" folder located under the "XAMMP" folder on your

C: drive. The file path is "C:\xampp\htdocs" for your Web server.]

5. XAMPP Control Panel open then Apache and MySQL click the Start button

6. Open browser type in address bar (http://localhost/phpmyadmin) start for MYSQL

Server

7. Create a database with name "your_database_name"

8. Import 127.0.0.1.sql file (given inside the project folder)

9. Run the project write in browser URL (http://localhost/project_foldername press

enter)

10. Final to see your project home screen and do your work

11. Good Luck
